Art Unit: 2651

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, drawn to a recording apparatus/method including extracting clock and transport packet from a stream, clock generating, time-stamp generating, and time stamp continuity information generating, classified in class 369, subclass 53.34.
 - II. Claims 6-8, drawn to an editing apparatus/method including selecting one of a plurality of streams and time stamp continuity information rewriting, classified in class 369, subclass 47.23.
 - III. Claim 14, drawn to a recording medium for recording time stamps discontinuity information between connected streams, classified in class 369, subclass 275.3.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as with a reproducing apparatus/method processing a stream based on continuity information. See MPEP § 806.05(d).

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the recording apparatus/method can be used with a recording medium storing continuity information in a lead-in

Art Unit: 2651

or header region, rather than disbursed in the streams. The subcombination has separate utility such as with a reproducing apparatus/method processing a stream based on discontinuity information.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the editing apparatus/method can be used with a recording medium storing continuity information in a lead-in or header region, rather than disbursed in the streams. The subcombination has separate utility such as with a reproducing apparatus/method processing a stream based on discontinuity information.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to W. R. Young whose telephone and VoiceMail number is (703) 308-1554. If a plurality of attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Korzuch, can be reached on (703) 305-6137.

The appropriate fax phone number for the organization (Group 2650) where this application or proceeding is assigned is (703) 872-9314.
